

## TOOLKIT SHIPPING API

A full featured, server-based shipping API known amongst integrators for its scalability and reliability, Toolkit integrates with TMS, WMS, ERP, order management, e-commerce, or other business systems using industry-standard interfaces (.NET, XML web services, COM, ), and connects to both Windows and non-Windows platforms. Toolkit offers the fastest throughput with unlimited customization and scalability options.

Target Customer: Ships 50 – 250,000+ pkg/day in global markets and need the ability to scale with the growth of their business, markets, locations, and operations.

## TOOLKIT CLOUD HOSTED SHIPPING API

Toolkit Cloud enables online (cloud-based) access to the ConnectShip Toolkit API solution online, without the requirement to install a dedicated, onsite server – reducing the need for IT resources. Toolkit Cloud is available in a pay-as-you-go model, again reducing the initial investment cost. Toolkit Cloud gives you a powerful and flexible technology base for building applications, and offers the flexibility to evolve with your future business needs.

Target Customer: Wants the seamless integration, scalability, and flexible integration options of Toolkit with the low start-up cost and IT requirements of a hosted solution.

## TOOLKIT MERCHANT RATING API

Toolkit Merchant is a highly scalable shipment rating API that allows you to integrate rating functionality into your existing e-commerce stores and enterprise applications. Toolkit Merchant, through XML interfaces, allows you to include your available/negotiated rates and services into your TMS, WMS, ERP, or other applications so that customers can compare and select services that most fits their needs.

Target Customer: Wants to provide customers with actual shipping rates and dates at point-of-purchase.

## WAREHOUSE CLIENT/SERVER SHIPPING MANAGEMENT APPLICATION

Warehouse is a full-featured client/server shipping management application for customers who are not using an enterprise resource planning system to facilitate shipping. It enables complete end-to-end shipping capabilities for both international and domestic shippers and allows the customer to centrally manage and administer multiple locations and workstations on a single system. Warehouse provides access to the latest information from major carriers using ConnectShip carrier components, where all service guides, regulations, rate charts, routing tables, delivery commitments, etc. are maintained.

Target Customer: Mid-sized to enterprise companies who ship 50 – 250,000+ pkg/day and need system-wide access to a global customer address list, and doesn't have a shipping application integrated to their enterprise system.
