ConnectShip | iShip
Online Suite

Visibility **Scalability** **Compliance**

Simplify Your Small Parcel Shipping with our Cloud Technology

Simplify your small parcel shipping operations, reduce costs, and improve efficiency with the ConnectShip | iShip Online Suite. The shipping solutions (PSS and DSS) are scalable and can be tailored and configured to fit your workflow, volume demands, branding, administrative controls, and security features. Also available within the suite are CES (kiosk-style consumer interface) and administrative offerings.

Leveraging Cloud Technology
We store your data in the ConnectShip | iShip data center for centralized administration and storage, so we can provide you with a real-time snapshot of activity throughout your entire network of locations and users at any time. Follow shipments from initial processing through delivery. Analyze your historical data with built-in queries, custom internal routing labels, reports, and tracking. History is secured in a dedicated partition just for you in our state-of-the-art data center, assuring data integrity, fraud protection, and providing the benefit of off- premise backup for your records. Our optimized processing allows for lightning fast transactions even during peak season spikes.
Features available in the Online Suite include, but are not limited to:

- Multi-carrier, single and multi-piece shipping
- Sophisticated charge code support
- Detailed and customized reports
- Export and import documents
- Domestic and international shipment capabilities
- Shipment pre-processing
- Automatic updates for all compliance data
- Three rate sets used on all transactions: negotiated, published, and retail
- Multiple pricing options, including convenient "pay-per-transaction"
