## **Integrate Shipping Functionality into Your Business Applications**

Incorporate shipping functionality into new or existing business applications. Toolkit provides a straightforward means for supporting shipping operations directly within enterprise, supply chain, and other business systems. A set of API-based development tools, Toolkit can automate your shipping while working seamlessly within your enterprise system. It is designed to adjust to your business processes so that you spend less time adapting to your shipping management and more time doing business. It is the ideal solution for developers and integrators to incorporate shipping and rating functionality into enterprise, e-commerce, and supply chain management applications.

Toolkit is an API connecting developers and integrators to a powerful set of components for building comprehensive multi-carrier shipping solutions. Toolkit provides a powerful and flexible technology base for building applications, and offers the flexibility to evolve with your future business needs. It integrates to systems using industry-standard interfaces and provides users with tracking numbers, shipping rates, and shipping labels, along with other documents required by package and freight carriers.

Toolkit enables the use of multiple carriers directly within your business applications and provides access to shipping functions throughout the order management cycle. It works well for industries that require a full range of carrier services, from time or temperature-sensitive shipping for the healthcare and high-tech industries to heavy freight needs of the industrial manufacturing industry.

ConnectShip | iShip's patented technology for package and LTL shipment manifesting allows you to ship using major small package and LTL carriers, and even a customizable carrier component. Toolkit can process shipments from more than 50 origin countries.
